Evolving (Im)mobility Regimes: Migrant Workers’ Entitlement and Precarization in Times of Crisis

Eric Crettaz (HES-SO Geneva, School of Social Work), Stefanie Kurt (HES-SO Valais-Wallis, School of Social Work), Francesco Maiani (University of Lausanne), Eva Mey (ZHAW Social Work)

Qualitative interviews

In-depth interviews with migrant workers

Secondary analysis - individual data

Comparative datasets
Data collections instruments
(Number of IPs in Phase II):

**Qualitative interviews (18)**

In qualitative interviews the interviewees are given space to expand their answers and accounts of their experiences and feelings. Moreover, their answers are not pre-categorised in the interview schedule. If group interaction is part of the method, use “Focus group”.

- **Expected documentation**: Exhaustive list of anonymized interviews with relevant characteristics and Interview guideline.
- **Expected archived data**: Sample of anonymized transcript.

**Secondary analysis (15)**

Secondary data refers to data that was collected by someone other than the user. Common sources of secondary data for social science include censuses, information collected by government departments, organisational records and data that was originally collected for other research purposes. Primary data, by contrast, are collected by the investigator conducting the research.

- **Expected documentation**: Codebook from data provider. If Data was customized for the project, Codebook in DDI standard.
- **Expected archived data**: None if dataset is referenced in the documentation.

**Analysis of documents (13)**

Documentary analysis is a type of qualitative research in which documents are reviewed by the analyst to assess an appraisal theme. Dissecting documents involves coding content into subjects like how focus group or interview transcripts are investigated. Standardized analysis allow quantitative interpretation of results.

- **Expected documentation**: Exhaustive list of documents and coded variables.
- **Expected archived data**: Sample of anonymized content.

**Analysis of content (8)**

Content analysis is a research method for studying documents and communication artifacts, which might be texts of various formats, pictures, audio or video. Use “Analysis of documents” when referring to administrative, legal or historical contents. Standardized analysis allow quantitative interpretation of results.

- **Expected documentation**: Exhaustive list of documents and relevant Characteristics.
- **Expected archived data**: Sample of anonymized content.

**Standardized interviews (7)**

A structured interview (also known as a standardized interview or a researcher-administered survey) is a quantitative research method commonly employed in survey research. The aim of this approach is to ensure that each interview is presented with exactly the same questions in the same order.

- **Expected documentation**: Codebooks according to DDI standard.
- **Expected archived data**: Exhaustive anonymized dataset.

**Observation (6)**

Research method that involves collecting data as they occur (for example, observing behaviors, events, development of condition or disease, etc.), without attempting to manipulate any of the independent variables.

- **Expected documentation**: Exhaustive list of anonymized field observations with relevant characteristics.
- **Expected archived data**: Sample of anonymized transcript.

**Experiment (6)**

Research method involving the manipulation of some or all of the independent variables included in the hypotheses.

- **Expected documentation**: Codebooks according to DDI standard.
- **Expected archived data**: Exhaustive anonymized dataset.

**Focus groups (3)**

A group discussion on a particular topic, organized for research purposes. The individuals are selected with relevance to the topic, and interaction among the participants is used as part of the method.

- **Expected documentation**: List of sessions with relevant variables.
- **Expected archived data**: Sample of anonymized transcript.
