In qualitative interviews the interviewees are given space to expand their answers and accounts of their experiences and feelings. Moreover, their answers are not pre-categorised in the interview schedule. If group interaction is part of the method, use "Focus group".

**Secondary analysis (9)**

Secondary data refers to data that was collected by someone other than the user. Common sources of secondary data for social science include censuses, information collected by government departments, organisational records and data that was originally collected for other research purposes. Primary data, by contrast, are collected by the investigator conducting the research.

**Analysis of documents (8)**

Documentary analysis is a type of qualitative research in which documents are reviewed by the analyst to assess an appraisal theme. Dissecting documents involves coding content into subjects like how focus group or interview transcripts are investigated. Standardized analysis allow quantitative interpretation of results.

**Standardized interviews (6)**

A structured interview (also known as a standardized interview or a researcher-administered survey) is a quantitative research method commonly employed in survey research. The aim of this approach is to ensure that each interview is presented with exactly the same questions in the same order.

**Observation (5)**

Research method that involves collecting data as they occur (for example, observing behaviors, events, development of condition or disease, etc.), without attempting to manipulate any of the independent variables.

**Experiment (4)**

Research method involving the manipulation of some or all of the independent variables included in the hypotheses.

**Focus groups (3)**

A group discussion on a particular topic, organized for research purposes. The individuals are selected with relevance to the topic, and interaction among the participants is used as part of the method.

**Analysis of content (3)**

Content analysis is a research method for studying documents and communication artifacts, which might be texts of various formats, pictures, audio or video. Use "Analysis of documents" when refering to administrative, legal or historical contents. Standardized analysis allow quantitative interpretation of results.
